If you require another part number please contact with us.

※ Note

- All test data is reference to 25°C ambient.
- Idc: DC current (A) that will cause an approximate ΔT of 40°C
- Isat : DC current (A) that will cause L0 to drop approximately 20%
- Operat between temperature range -55°C to +125°C
- The part temperature (ambient + temp rise) should not exceed 125°C under worst case operating conditions.
 Circuit design, component, PWB trace size and thickness, airflow and other cooling precision all affect the part temperature. Part temperature should be verified in the den application.
- The rated current as listed is either the saturation current or the heating current depending on which value is lower
