Reliability Test Items

Test	Item	Test Method	Spec. No.
. M	echanical Performance Tes	ts	
	shock	Orient the sample in any attitude and drop it three times from a height of 75 cm onto a hardwood board with a thickness of 3 cm.	
1.2	Vibration	Subject the sample to 1.5-minute cycles of frequencies of 10 to 500Hz and amplitudes of 1.5 mm or acceleration to 10G for two hours in each of the X, Y, and Z directions, for 6 hours in total.	
1.3	Tensile Strength of Terminal	Apply a 1.0kg tensile load to each terminal and sustain it for 30±5 seconds.	A.C
1.4	Bending Strength of Terminal	Apply a 0.5kg load to one of the terminals, and after tilting the main unit for $90^\circ$ , restore to its original attitude. Then, tilt it in an opposite direction for $90^\circ$ , and restore to its original attitude. (See Fig. 1)	
1.5	Solderability	Dip terminals in RMA flux for 5±0.5 sec. Under room temperature.  Dip Terminals in a 230±5°C solder bath for 5±0.5 seconds. The solder shall leave an undipped terminal length of 2mm at their base.	
1.6	Resistance to Soldering Heat	Dip Terminals in a 260±5°C solder bath for 10±0.5 seconds. The solder shall leave an undipped terminal length of 2mm at their base.	
1.7	Leakage Test	Take measurements with a helium leakage detector.	
e. Er	nvironmental Tests		
2.1	Cold	Expose the sample in an inoperative mode to 240 hours in a -40 °C.	
2.2	Dry Heat	Expose the sample in an inoperative mode to 240 hours in a +85 °C.	
2.3	Damp Heat	Expose the Sample in an inoperative mode to 240 hours in a +65°C, and 95%RH.	
2.4	Thermal Shock	Subject the sample to 5 temperature variation cycles at -40 °C for 30 minutes and +100 °C for the next 30 minutes in each cycle.
