π 160U/ π 161U/ π 162U/ π 163U

FEATURES

Ultra low power consumption (150Kbps):

0.55mA/Channel

High data rate: π 16xAxx: 600Mbps
 π 16xExx: 200Mbps
 π 16xMxx: 10Mbps
 π 16xUxx: 150kbps

High common-mode transient immunity: 150 kV/ μ s typical

High robustness to radiated and conducted noise

Isolation voltages:

π 16xx3x: AC 3000Vrms

π 16xx6x: AC 6000Vrms

High ESD rating:

ESDA/JEDEC JS-001-2017

Human body model (HBM) \pm 8kV, all pins

Safety and regulatory approvals (Pending):

UL certificate number: E494497

3000Vrms/6000Vrms for 1 minute per UL 1577

CSA Component Acceptance Notice 5A

VDE certificate number: 40047929

DIN V VDE V 0884-10 (VDE V 0884-10):2006-12

V_{IORM} = 707V peak/1200V peak

CQC certification per GB4943.1-2011

3 V to 5.5 V level translation

AEC-Q100 qualification

Wide temperature range: -40°C to 125°C

16-lead, RoHS-compliant, (W)SOIC package

APPLICATIONS

General-purpose multichannel isolation

Industrial field bus isolation

GENERAL DESCRIPTION

The π 1xxxx is a 2PaiSemi digital isolators product family that includes over hundreds of digital isolator products. By using matured standard semiconductor CMOS technology and 2PaiSEMI *iDivider* technology, these isolation components provide outstanding performance characteristics and reliability superior to alternatives such as optocoupler devices and other integrated isolators.

Intelligent voltage divider technology (*iDivider* technology) is a new generation digital isolator technology invented by 2PaiSEMI. It uses the principle of capacitor voltage divider to transmit voltage signal directly cross the isolator capacitor without signal modulation and demodulation.

The π 1xxxx isolator data channels are independent and are available in a variety of configurations with a withstand voltage

rating of 1.5 kV rms to 6.0 kV rms and the data rate from DC up to 600Mbps (see the Ordering Guide). The devices operate with the supply voltage on either side ranging from 3.0 V to 5.5 V, providing compatibility with lower voltage systems as well as enabling voltage translation functionality across the isolation barrier. The fail-safe state is available in which the outputs transition to a preset state when the input power supply is not applied.

Table 1. Absolute Maximum Ratings⁴

Parameter	Rating
Supply Voltages ($V_{DD1-GND1}$, $V_{DD2-GND2}$)	-0.5 V to +7.0 V
Input Voltages (V_{IA} , V_{IB}) ¹	-0.5 V to $V_{DDx} + 0.5$ V
Output Voltages (V_{OA} , V_{OB}) ¹	-0.5 V to $V_{DDx} + 0.5$ V
Average Output Current per Pin ² Side 1 Output Current (I_{O1})	-10 mA to +10 mA
Average Output Current per Pin ² Side 2 Output Current (I_{O2})	-10 mA to +10 mA
Common-Mode Transients Immunity ³	-150 kV/ μs to +150 kV/ μs
Storage Temperature (T_{ST}) Range	-65°C to +150°C
Ambient Operating Temperature (T_A) Range	-40°C to +125°C

Notes:

¹ V_{DDx} is the side voltage power supply V_{DD} , where $x = 1$ or 2 .

² See Figure7 for the maximum rated current values for various temperatures.

³ See Figure21 for Common-mode transient immunity (CMTI) measurement.

⁴ Stresses at or above those listed under Absolute Maximum Ratings may cause permanent damage to the device. These are stress rating only; functional operation of the device at these or any other conditions above those indicated in the operational section of this specification is not implied. Operation beyond the maximum operating conditions for extended periods may affect product reliability.

V_{ix} Input ¹	V_{DD1} State ¹	V_{DD0} State ¹	Default Low V_{ox} Output ¹	Default High V_{ox} Output ¹	Test Conditions /Comments
Low	Powered ²	Powered ²	Low	Low	Normal operation
High	Powered ²	Powered ²	High	High	Normal operation
Open	Powered ²	Powered ²	Low	High	Default output
Don't Care ⁴	Unpowered ³	Powered ²	Low	High	Default output ⁵
Don't Care ⁴	Powered ²	Unpowered ³	High Impedance	High Impedance	

Notes:

¹ V_{ix}/V_{ox} are the input/output signals of a given channel (A or B). V_{DD1}/V_{DD0} are the supply voltages on the input/output signal sides of this given channel.

² Powered means $V_{DDx} \geq 2.9V$

³ Unpowered means $V_{DDx} < 2.3V$

⁴ Input signal (V_{ix}) must be in a low state to avoid powering the given V_{DD1} through its ESD protection circuitry.

⁵ If the V_{DD1} goes into unpowered status, the channel outputs the default logic signal after around 1us. If the V_{DD1} goes into powered status, the channel outputs the input status logic signal after around 3us.

APPLICATIONS INFORMATION

OVERVIEW

The π 1xxxx are 2PaiSemi digital isolators product family based on 2PaiSEMI unique **iDivider** technology. Intelligent voltage **Divider** technology (**iDivider** technology) is a new generation digital isolator technology invented by 2PaiSEMI. It uses the principle of capacitor voltage divider to transmit signal directly cross the isolator capacitor without signal modulation and demodulation. Compare to the traditional Opto-couple technology, icoupler technology, OOK technology, **iDivider** is a more essential and concise isolation signal transmit technology which leads to greatly simplification on circuit design and therefore significantly improves device performance, such as lower power consumption, faster speed, enhanced anti-interference ability, lower noise.

By using matured standard semiconductor CMOS technology and the innovative **iDivider** design, these isolation components provide outstanding performance characteristics and reliability superior to alternatives such as optocoupler devices and other integrated isolators. The π 1xxxx isolator data channels are independent and are available in a variety of configurations with a withstand voltage rating of 1.5 kV rms to 6.0 kV rms and the data rate from DC up to 600Mbps (see the Ordering Guide).

The π 160Uxx/ π 161Uxx/ π 162Uxx/ π 163Uxx are the outstanding 150Kbps hexa-channel digital isolators with the enhanced ESD capability. the devices transmit data across an isolation barrier by layers of silicon dioxide isolation.

The devices operate with the supply voltage on either side ranging from 3.0 V to 5.5 V, offering voltage translation of 3.3 V and 5 V logic.

The π 160Uxx/ π 161Uxx/ π 162Uxx/ π 163Uxx have very low propagation delay and high speed. The input/output design techniques allow logic and supply voltages over a wide range from 3.0 V to 5.5 V, offering voltage translation of 3.3 V and 5 V logic. The architecture is designed for high common-mode transient immunity and high immunity to electrical noise and magnetic interference.

See the Ordering Guide for the model numbers that have the fail-safe output state of low or high.

PCB LAYOUT

The low-ESR ceramic bypass capacitors must be connected between V_{DD1} and GND_1 and between V_{DD2} and GND_2 . The bypass capacitors are placed on the PCB as close to the isolator device as possible. The recommended bypass capacitor value is between 0.1 μ F and 10 μ F. To enhance the robustness of a design,

the user may also include resistors (50–300 Ω) in series with the inputs and outputs if the system is excessively noisy.

Avoid reducing the isolation capability, Keep the space underneath the isolator device free from metal such as planes, pads, traces and vias.

To minimize the impedance of the signal return loop, keep the solid ground plane directly underneath the high-speed signal path, the closer the better. The return path will couple between the nearest ground plane to the signal path. Keep suitable trace width for controlled impedance transmission lines interconnect.

To reduce the rise time degradation, keep the length of input/output signal traces as short as possible, and route low inductance loop for the signal path and It's return path.

CMTI MEASUREMENT

To measure the Common-Mode Transient Immunity (CMTI) of π 1xxxx isolator under specified common-mode pulse magnitude (V_{CM}) and specified slew rate of the common-mode pulse (dV_{CM}/dt) and other specified test or ambient conditions, The common-mode pulse generator (G_1) will be capable of providing fast rising and falling pulses of specified magnitude and duration of the common-mode pulse (V_{CM}) and the maximum common-mode slew rates (dV_{CM}/dt) can be applied to π 1xxxx isolator coupler under measurement. The common-mode pulse is applied between one side ground GND_1 and the other side ground GND_2 of π 1xxxx isolator and shall be capable of providing positive transients as well as negative transients.

REVISION HISTORY

Revision	Updated	Date	Page	Change Record
1	Devin	2018/09/19	All	Initial version
2	Devin	2018/11/28	P1,P12	Changed C_{IN} , C_{OUT} in Figure2 from 0.1uF to 1uF. Changed the recommended bypass capacitor value from between 0.1 μ F and 1 μ F to between 0.1 μ F and 10 μ F.
3	Devin	2019/09/08	P1,P13, P15,P16	P1: Changed the address from 'Room 19307, Building 8, No.498, GuoShouJing Road' to 'Room 308-309, No.22, Boxia Road'; Add iDivider technology description in General Description. Changed C_{IN} , C_{OUT} in Figure2 from 1uF to 0.1uF. P13: Add iDivider technology description in overview. P15: Updated 16-Lead SOIC_W reel drawing. P16: Add character 'S' and 'Q' in part number named rule; Changed the SOIC_W quantity from '1000 per reel' to '1500 per reel'.
