

## PTVSHC2EN4V8UF

## **Uni-directional 4.8V High Capacitance TVS**

### Description

The PTVSHC2EN4V8UF Transient Voltage Suppressor is designed to replace multilayer varistors (MLVs) in portable applications such as cell phones, notebook computers, and PDA's. They feature large cross-sectional area junctions for conducting high transient currents, offer desirable electrical characteristics for board level protection, such as fast response time, lower operating voltage, lower clamping voltage and no device degradation when compared to MLVs. The PTVSHC2EN4V8UF protects sensitive semiconductor components from damage or upset due to electrostatic discharge (ESD) and other voltage induced transient events. The PTVSHC2EN4V8UF is available in a DFN1610-2L package with working voltages of 4.8 volt.

#### DFN1610-2L(Bottom View)

#### Feature

- > 2000W Peak pulse power per line ( $t_P = 8/20\mu s$ )
- DFN1610-2L package
- Response time is typically < 1 ns</p>
- Protect one I/O or power line
- Low clamping Voltage
- RoHS compliant
- Transient protection for data lines to IEC 61000-4-2(ESD)
  ±30kV(air), ±30kV(contact); IEC 61000-4-4 (EFT) 40A (5/50ns)
  IEC 61000-4-5 (Lightning) 180A (8/20us)

#### Applications

- Cell phone handsets and accessories
- Personal digital assistants (PDA's)
- Notebooks, desktops, and servers
- Portable instrumentation
- Cordless phones
- Digital cameras
- Peripherals
- MP4 players

#### **Mechanical Characteristics**

- Lead finish:100% matte Sn(Tin)
- Mounting position: Any
- Qualified max reflow temperature:260°C
- Pure tin plating: 7 ~ 17 um
- ➢ Pin flatness:≤3mil

#### **PCB** Design

For TVS diodes a low-ohmic and low-inductive path to chassis earth is absolutely mandatory in order to achieve good ESD protection. Novices in the area of ESD protection should take following suggestions to heart:

- Do not use stubs, but place the cathode of the TVS diode directly on the signal trace.
- > Do not make false economies and save copper for the ground connection.
- > Place via holes to ground as close as possible to the anode of the TVS diode.
- Use as many via holes as possible for the ground connection.
- > Keep the length of via holes in mind! The longer the more inductance they will have.
