

SGMOP07C

600kHz, Low Noise, High Voltage, Precision Operational Amplifier

GENERAL DESCRIPTION

The SGMOP07C is a low noise, low offset voltage and high voltage operational amplifier, which can be designed into a wide range of applications. The SGMOP07C has a high gain-bandwidth product of 600kHz, a slew rate of 3V/ μ s and a quiescent current of 0.75mA at wide power supply range.

The SGMOP07C is designed to provide optimal performance in low noise systems. It provides rail-to-rail output swing into heavy loads.

The single SGMOP07C is available in Green SOIC-8 package. It is specified over the extended -40°C to +125°C temperature range.

FEATURES

- Rail-to-Rail Output
- Low Bias Current: ± 1 nA (TYP)
- High Open-Loop Gain: 130dB at $V_S = \pm 15$ V
- High PSRR: 135dB
- Gain-Bandwidth Product: 600kHz
- Low Noise: 8.5nV/ $\sqrt{\text{Hz}}$ at 1kHz
- Supply Voltage Range:
3.6V to 36V or ± 1.8 V to ± 18 V
- Input Common Mode Voltage Range:
 $(-V_S) + 1.5$ V to $(+V_S) - 2$ V
- Low Quiescent Current: 0.75mA (TYP)
- -40°C to +125°C Operating Temperature Range
- Available in Green SOIC-8 Package

APPLICATIONS

Sensors
Audio
Active Filters
A/D Converters
Communications
Test Equipment
Cellular and Cordless Phones
Laptops and PDAs
Photodiode Amplification

PACKAGE/ORDERING INFORMATION

MODEL	PACKAGE DESCRIPTION	SPECIFIED TEMPERATURE RANGE	ORDERING NUMBER	PACKAGE MARKING	PACKING OPTION
SGMOP07C	SOIC-8	-40°C to +125°C	SGMOP07CXS8G/TR	SGM OP07CXS8 XXXXX	Tape and Reel, 2500

NOTE: XXXXX = Date Code and Vendor Code.

Green (RoHS & HSF): SG Micro Corp defines "Green" to mean Pb-Free (RoHS compatible) and free of halogen substances. If you have additional comments or questions, please contact your SGMICRO representative directly.

ABSOLUTE MAXIMUM RATINGS

Supply Voltage, +V_S to -V_S 40V
 Input Common Mode Voltage Range
 (-V_S) - 0.3V to (+V_S) + 0.3V
 Junction Temperature +150°C
 Storage Temperature Range -65°C to +150°C
 Lead Temperature (Soldering, 10s) +260°C
 ESD Susceptibility
 HBM 2000V
 MM 250V
 CDM 1000V

RECOMMENDED OPERATING CONDITIONS

Supply Voltage Range 3.6V to 36V
 Operating Temperature Range -40°C to +125°C

OVERSTRESS CAUTION

Stresses beyond those listed may cause permanent damage to the device. Functional operation of the device at these or any other conditions beyond those indicated in the operational section of the specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.

ESD SENSITIVITY CAUTION

This integrated circuit can be damaged by ESD if you don't pay attention to ESD protection. SGMICRO recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage. ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

DISCLAIMER

SG Micro Corp reserves the right to make any change in circuit design, specification or other related things if necessary without notice at any time.

PIN CONFIGURATION

ELECTRICAL CHARACTERISTICS

(At T_A = +25°C, V_S = ±5V to ±15V, V_{CM} = 0V, V_{OUT} = 0V and R_L = 2kΩ connected to 0V, Full = -40°C to +125°C, unless otherwise noted.)

APPLICATION NOTES

Power-Supply Bypassing and Layout

The SGMOP07C operates from either a single 3.6V to 36V supply or dual ±1.8V to ±18V supplies. For single-supply operation, bypass the power supply +V_S with a 0.1µF ceramic capacitor which should be placed close to the +V_S pin. For dual-supply operation, both the +V_S and the -V_S supplies should be bypassed to ground with separate 0.1µF ceramic capacitors. A 10µF tantalum capacitor can be added for better performance.

Good PCB layout techniques optimize performance by decreasing the amount of stray capacitance at the op amp's inputs and output. To decrease stray capacitance, minimize trace lengths and widths by placing external components as close to the device as possible. Use surface-mount components whenever possible.

For the operational amplifier, soldering the part to the board directly is strongly recommended. Try to keep the high frequency current loop area small to minimize the EMI (electromagnetic interference).

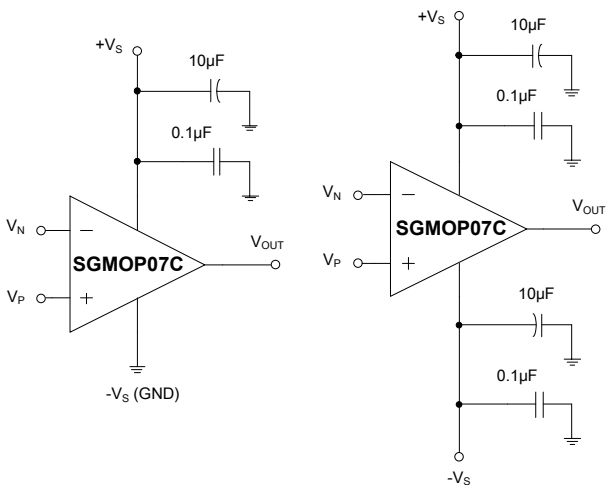

Figure 1. Amplifier with Bypass Capacitors

Grounding

A ground plane layer is important for SGMOP07C circuit design. The length of the current path in an inductive ground return will create an unwanted voltage noise. Broad ground plane areas will reduce the parasitic inductance.

Input-to-Output Coupling

To minimize capacitive coupling, the input and output signal traces should not be in parallel. This helps reduce unwanted positive feedback.

Differential Amplifier

The circuit shown in Figure 2 performs the difference function. If the resistor ratios are equal ($R_4/R_3 = R_2/R_1$), then $V_{OUT} = (V_P - V_N) \times R_2/R_1 + V_{REF}$.

Figure 2. Differential Amplifier

Instrumentation Amplifier

The circuit in Figure 3 performs the same function as that in Figure 2 but with a high input impedance.

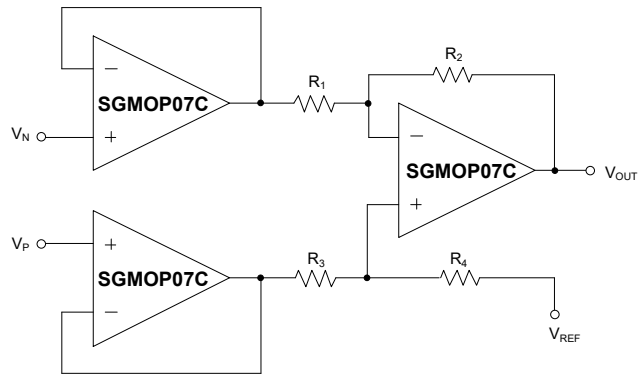

Figure 3. Instrumentation Amplifier

Active Low-Pass Filter

The low-pass filter shown in Figure 4 has a DC gain of $(-R_2/R_1)$ and the -3dB corner frequency is $1/2\pi R_2 C$. Make sure the filter bandwidth is within the bandwidth of the amplifier. Feedback resistors with large values can couple with parasitic capacitance and cause undesired effects such as ringing or oscillation in high-speed amplifiers. Keep resistor values as low as possible and consistent with output loading consideration.
