### Low-Power Rail-to-Rail Input Output Operational Amplifiers

[Http://www.willsemi.com](http://www.willsemi.com)

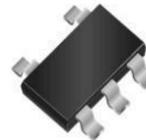

#### Descriptions

The WS72321 series is a single low-voltage operational amplifier with rail-to-rail input/output swing. Ultra low quiescent current makes this amplifier ideal for portable, battery operated equipment. The common mode input range includes ground making the device useful for low-side current-shunt measurements. The ultra small packages allow for placement on the PCB in close proximity to the signal source thereby reducing noise pickup.

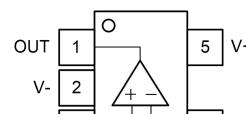

The WS72321 is available with MSL 3 Level in SOT353(SC70-5L) package and SOT23-5L package. Standard products are Pb-Free and halogen-Free.

#### Applications

- Active Filters
- Smoke/Gas Sensors
- Battery Powered Electronic Equipments
- Personal Medical Care

#### Features

- Single Supply Voltage : 1.8~5.5V
- Quiescent Current : 48 $\mu$ A Typical
- GBWP : 1.5MHz
- Slew Rate : 1.1V/ $\mu$ s
- Offset Voltage : 3mV Maximum
- Offset Voltage Temp. Drift : 0.5 $\mu$ V / °C
- THD+N : -102dB@1kHz, -90dB@10kHz
- CMRR/PSRR : 104dB/111dB
- Output Short-Circuit Curr. : 43mA
- -40°C to 125°C Operation Range
- Drives 2k $\Omega$  Resistive Loads
- No Output Crossover Distortion
- No Phase Reversal from Overdriven Input
- Rail-to-Rail Input/Output Swing

**Note:**

1. Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. These are only stress ratings, and functional operation of the device at these or any other conditions beyond those indicated under recommended operating conditions are not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
2. All voltage values, except differential voltage are with respect to network terminal.
3. Differential voltages are at +IN with respect to -IN.

**Note:**

1. Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. Exposure to any Absolute Maximum Rating condition for extended periods may affect device reliability and lifetime.
2. A heat sink may be required to keep the junction temperature below the absolute maximum rating when the output is shorted indefinitely.
3. Thermal resistance varies with the amount of PC board metal connected to the package. The specified values are for short traces connected to the leads.
4. Full power bandwidth is calculated from the slew rate  $FPBW = SR / (\pi \cdot V_{P-P})$ .
