The Big Deal

- Very good rejection, 50 dB typical
- Rugged, ceramic construction
- Tiny size, 0.079 x 0.049 x 0.037” (0805)
- Excellent power handling, 6W

Product Overview

Mini-Circuits' LFCG-3800+ is an LTCC low pass filter with a passband from DC to 3900 MHz, supporting a variety of applications. This model provides 1.3 dB typical passband insertion loss and provides a very good stopband rejection due to strategically constructed layout with minimal interaction between components. It handles up to 6W RF input power and provides a wide operating temperature range from -55 to +100°C. Housed in a tiny 0805 ceramic form factor with wraparound terminations, the filter is ideal for dense PCB layouts and with minimal performance variation due to parasitics.

Key Features

Feature	Advantages
Ultra-wide stopband	The LTCC lowpass filter provides a very good stopband rejection until 18 GHz suitable for high end applications.
LTCC Construction	Provides repeatable performance in a rugged, ceramic package well suited for tough environments such as high humidity and temperature extremes.
Tiny size (0.079 x 0.049 x 0.037”)	Saves space in dense circuit board layouts and minimizes the effects of parasitics.
High power handling, 6W	Supports a wide range of system power requirements.
Wrap-around terminations	Provides excellent solderability and easy visual inspection
