

## Hall Effect Micro Switch IC

### Features

- **Micro Power Operation for Battery Applications**
- **Chopper Stabilized Amplifier**
- **Independent of North or South Pole Magnet,**
- **Easy for Manufacture**
- **Small Size Package**
- **Lead Free and Green Devices Available  
(RoHS Compliant)**

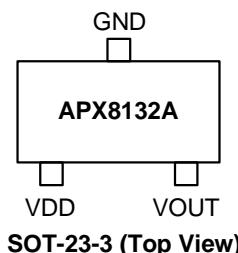

### Applications

- **Micro Switch**
- **Handheld Wireless Application Wake Up Switch**
- **Clamp Shell Type Application Switch**
- **Magnet Switch in Low Duty Cycle Applications**

### General Description

The APX8132A, integrated circuit, is an ultra-sensitive, pole independent Hall-effect switch with a latched digital output. A 2.5 volt to 3.5 volt operation and an unique clocking scheme reduce the average operating power requirements, either a north or a south pole of sufficient flux will turn the output on; in the absence of a magnetic field, the output is off. The polarity independence and minimal power requirement allow this device to be easily replaced reed switch for superior for signal conditioning. Advanced CMOS processing is used to take advantage of low-voltage and low-power requirements, SOT-23 package provides an optimized package for most applications.

### Pin Configuration

SOT-23-3 (Top View)

### Ordering and Marking Information

APX8132A □□□-□□□	Package Code A : SOT-23-3 AT : TSOT-23 Temperature Range I : -40 to 85 °C Handling Code TR : Tape & Reel Assembly Material G : Halogen and Lead Free Device
APX8132A A/AT: A32X	X - Date Code

Note: ANPEC lead-free products contain molding compounds/die attach materials and 100% matte tin plate termination finish; which are fully compliant with RoHS. ANPEC lead-free products meet or exceed the lead-free requirements of IPC/JEDEC J-STD-020D for MSL classification at lead-free peak reflow temperature. ANPEC defines "Green" to mean lead-free (RoHS compliant) and halogen free (Br or Cl does not exceed 900ppm by weight in homogeneous material and total of Br and Cl does not exceed 1500ppm by weight).

ANPEC reserves the right to make changes to improve reliability or manufacturability without notice, and advise customers to obtain the latest version of relevant information to verify before placing orders.

## Absolute Maximum Ratings $T_A = 25^\circ\text{C}$ unless otherwise noted<sup>(Note 1)</sup>

Symbol	Parameter	Rating	Unit
$V_{DD}$	Supply Voltage	5	V
$V_{OUT}$	Output Voltage	5	V
$I_{OUT}$	Output Current	$\pm 1$	mA
$T_J$	Junction Temperature Range	150	$^\circ\text{C}$
$T_{STG}$	Storage Temperature Range	-65 to +150	

Note 1: Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

## Thermal Characteristics

Symbol	Parameter	Typical Value		Unit
$\theta_{JA}$	Junction-to-Ambient Resistance in Free Air <sup>(Note 2)</sup>	SOT-23 TSOT-23	260 275	$^\circ\text{C}/\text{W}$
$\theta_{JC}$	Junction-to-Case Resistance in Free Air <sup>(Note 2)</sup>	SOT-23 TSOT-23	145 152	$^\circ\text{C}/\text{W}$
$P_D$	Power Dissipation, $T_A=25^\circ\text{C}$	SOT-23 TSOT-23	0.385 0.364	W

Note 2:  $\theta_{JA}$  is measured with the component mounted on a high effective thermal conductivity test board in free air.

## Electrical Characteristics $T_A = 25^\circ\text{C}$ , $V_{DD}=3\text{V}$ unless otherwise noted

Symbol	Characteristic	Test Conditions	APX8132A			Unit
			Min.	Typ.	Max.

$B_{RPN}$			40	-30	-20	G
$B_{hys}$	Hysteresis		-	10	-	G

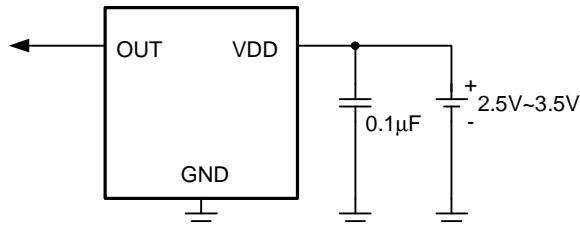

## Pin Description

PIN		FUNCTION
NO.	NAME	
1	VDD	Power input.
2	VOUT	When a magnetic field enters the hall element and exceeds the operate point BOPS (or less than BOPN), the output turns on (output is low). When the magnetic field is below the release point BRPS (or above BRPN), the output turns off (output is high).
3	GND	Ground Connection.

## Block Diagram

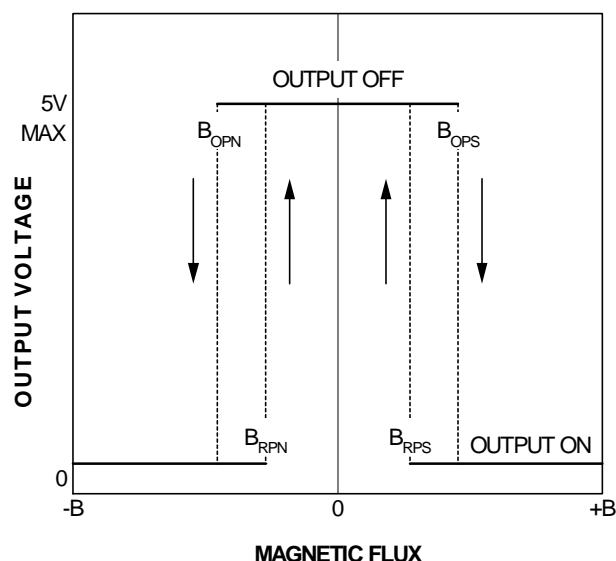

## Typical Application Circuit

## Function Description

### Operation

The output of APX8132A switches low (turn-on) when in presence of strong flux density facing the marked side of package exceeds the operate point  $B_{OPS}$  (or is less than  $B_{OPN}$ ). After turn-on, the output is capable of sinking up to 1mA and the output voltage is low (turn-on). In absence of flux density is below the release point  $B_{RPS}$  (or increases above  $B_{RPN}$ ), the APX8132A output switches high (turns off). After turn-off, the output is capable of sourcing up to 1mA and the output voltage is high (turn-off). The difference in the magnetic operated and released point is the hysteresis ( $B_{hys}$ ) of the device. This built-in hysteresis allows clean switching of the output even in the presence of external mechanical bouncing vibration and electrical noise.

## Application Information

It is strongly recommended that an external bypass capacitor can be connected (is close to the Hall sensor) between the supply and the ground of the device to reduce both external noise and noise generated by the chopper-stabilization technique. This is especially true due to the relatively high impedance of battery supplies.

### Pole-independent

The pole-independent sensing technique allows for operation with either a north or a south pole magnet orientation, enhancing the manufacturability of the device. The state-of-the-art technology provides the same output polarity for either pole in presence.

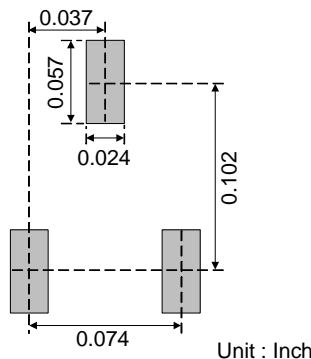

### Awake & Sleep

Internal awake & sleep timing block circuit activates the sensor for 180 µs and deactivates it for the remainder of the period (60 ms). A short “awake” time allows for stabilization prior to the sensor sampling and data latching on the falling edge of the timing pulse. While in sleep cycle, the output is latched in its previous state.

### Chopper Stabilized Technique

The chopper stabilized technique cancels the mismatching of the hall element, the amplifier offset voltage and temperature sensitive drift by the dynamic offset cancellation and switched capacitor technique. This technique produces devices has an extremely stable Hall output voltage, therefore, the magnetic switch points are stable.

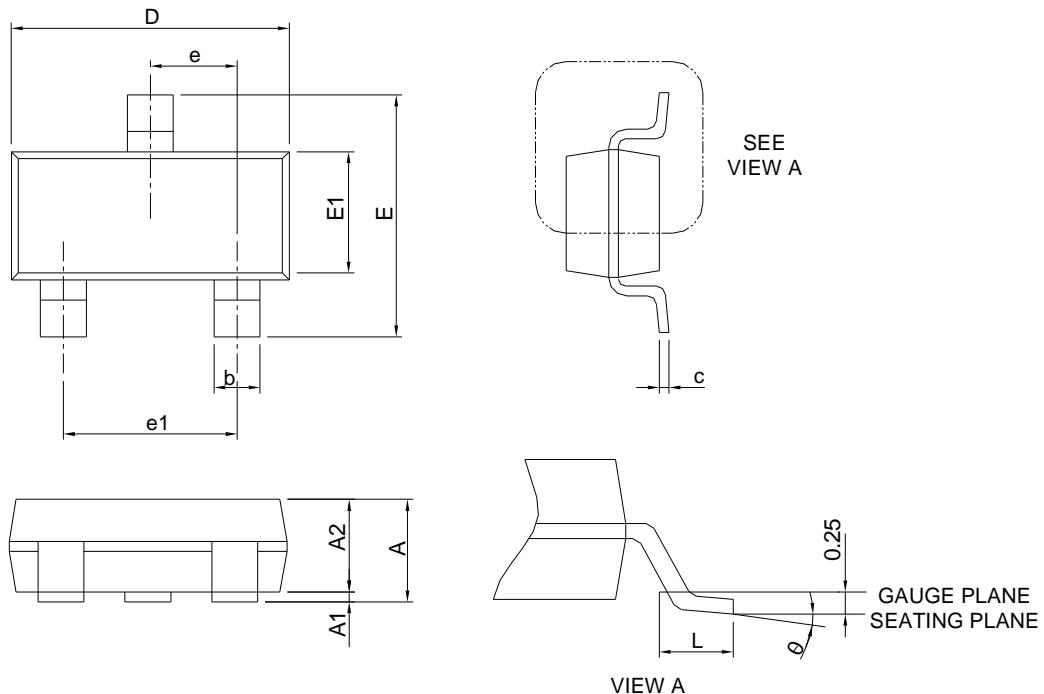

### Recommended Minimum Footprint

SOT-23-3
