

1. Description

The KIA79L12 series of three terminal positive regulators is available with several fixed output voltages making them useful in a wide range of applications. KIA79L12 can use as a zener diode/resistor combination replacement, and lower quiescent current. These devices suitable for a multitude of applications that require a regulated supply of up to 100 mA. The voltages available allow the KIA79L12 to be used in logic systems, instrumentation, HiFi, and other solid state electronic equipment. circuit takes over preventing the IC from overheating.

2. Applications

- Package SOT-89
- Output voltage tolerances of $\pm 5\%$ over the temperature range
- Output current of 100mA
- Internal thermal overload protection
- Output voltages of 12.0V
