

DM64ALS244B/DM74ALS244A/74ALS244B-1 Octal TRI-STATE® Bus Driver

General Description

This octal TRI-STATE bus driver is designed to provide the designer with flexibility in implementing a bus interface with memory, microprocessor, or communication systems. This device offers 64-extended temperature Grade product guaranteeing performance from -40°C to $+85^{\circ}\text{C}$. The output TRI-STATE gating control is organized into two separate groups of four buffers, and both control inputs enable the respective outputs when set logic low. The TRI-STATE circuitry contains a feature that maintains the buffer outputs in TRI-STATE (high impedance state) during power supply ramp-up or ramp-down. This eliminates bus glitching problems that arise during power-up and power-down.

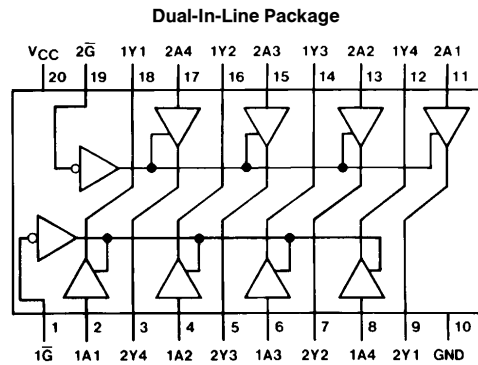

The 'ALS244B-1 version features the same performance as the standard version with the addition of increased current drive capability to meet the current requirements of various bus architectures. For all ALS-1 products, the recommended maximum I_{OL} is increased to 48 mA.

The DM64ALS244B version features the same performance as the standard version DM74ALS244A with a guarantee over an extended temperature range (-40°C to $+85^{\circ}\text{C}$).

Features

- Advanced low power oxide-isolated ion-implanted Schottky TTL process
- Functional and pin compatible with the 74LS counterpart
- Improved switching performance with less power dissipation compared with the 74LS counterpart
- Switching response specified into 500Ω and 50 pF load
- Switching response specifications guaranteed over full temperature and V_{CC} supply range
- PNP input design reduces input loading
- Low level drive current:
64ALS/74ALS = 24 mA
- Guaranteed performance over extended Temperature Range (-40°C to $+85^{\circ}\text{C}$) in 64-grade products
- Maximum I_{OL} increased to 48 mA for 'ALS244B-1 product

Note: The "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the "Electrical Characteristics" table are not guaranteed at the absolute maximum ratings. The "Recommended Operating Conditions" table will define the conditions for actual device operation.

LIFE SUPPORT POLICY

NATIONAL'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT OF NATIONAL SEMICONDUCTOR CORPORATION. As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and whose failure to perform, when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
2. A critical component is any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
